Due to ongoing research and development the manufacturers reserve the right to change the design or specification without prior notice.
The HeatManager system allows individual areas to be heated at the touch of a button or at pre-programmed times. The system is operated from one convenient control unit located centrally in the home for example in the kitchen. From the control unit you can see the status of your heating at a glance and switch on or off areas as required. Using state of the art technology it is simple to use and is maintenance free. Also in the event of a power cut, the PM3 900 HeatManager has a battery backup to memorise preset times. Among its features it incorporates a hot water only facility with a useful summer time setting.

The HeatManager system can be used with any wet central heating system requiring less plumbing in new installations and no additional plumbing in existing systems. The system uses low voltage sensors making it totally safe in the home.

The HeatManager system is ideal for domestic use but can be tailored to suit office blocks, hotels, schools etc. In fact anywhere there is a central heating system. In standard form the HeatManager system will operate up to 30 radiators plus hot water. Please contact our experienced design team at TEC Heating Controls to discuss individual requirements.
7.00am
Wake-up to a warm kitchen and bathroom. Perfect way to start the day.

1.30pm
Set the heating in your living areas to suit you whether at home or at work.

5.00pm
When dinner time comes share the heat of the kitchen whether you eat as a family or in separate rooms.

6.00pm
After dinner, you can have the hot water only on. Another great way to save energy.

7.00pm
Set the heat to help get those early sleepers off to bed, allowing you to enjoy the rest of the evening.

11.15pm
As you head off to bed you can set the heat to go off automatically.
**HeatManager**

**Features & Benefits**

**Features**
- 8 Independant Programmable Heating Zones
- 3 "on" and 3 "off" over 24 hours
- Independant Hot Water Control
- Dual Key Entry for Programming
- Manual Override Facility with Automatic self-cancel feature
- Summertime Setting
- Power Supply to Sensors
- Complete system compatible with TRV’s and/or room thermostats
- All off at midnight.
- Control over Pump and Boiler
- Holiday mode
- Boiler Interlock on Hotwater
- Modem compatible*

**Benefits**
- Heating control where you want it
- Heating control when you want it
- Maximum flexibility
- Prevents unauthorised tampering
- Enables temporary change of heating programme to suit requirements. Programmer reverts to automatic sequence at next time setting.
- Temporary override for warmer months, providing controlled hot water without central heating.
- Safe 24 volt supply
- Giving user control of your choice. A combination of both TRV’s and/or room stats.
- Maximises Energy Savings
- Pump and Boiler are automatically fired when any zone calls for heat and shuts off automatically when the last zone closes down
- Allows the user to switch the programmer off for up to 99 days and still allow any zone to be switched on manually and self cancel at midnight if left on.
- Maximises Energy Savings
- Allows for remote switching via mobile phone device
